

Software Connection to SCADA and to RTU

Need:

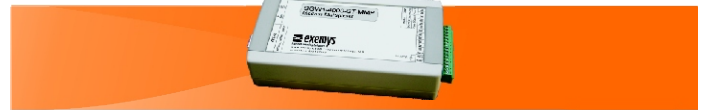

Transportadora de Gas del Norte (TGN) decide to connect a local SCADA system, to the RTU that measures gas parameters, which were already monitored from a central SCADA.

Solution:

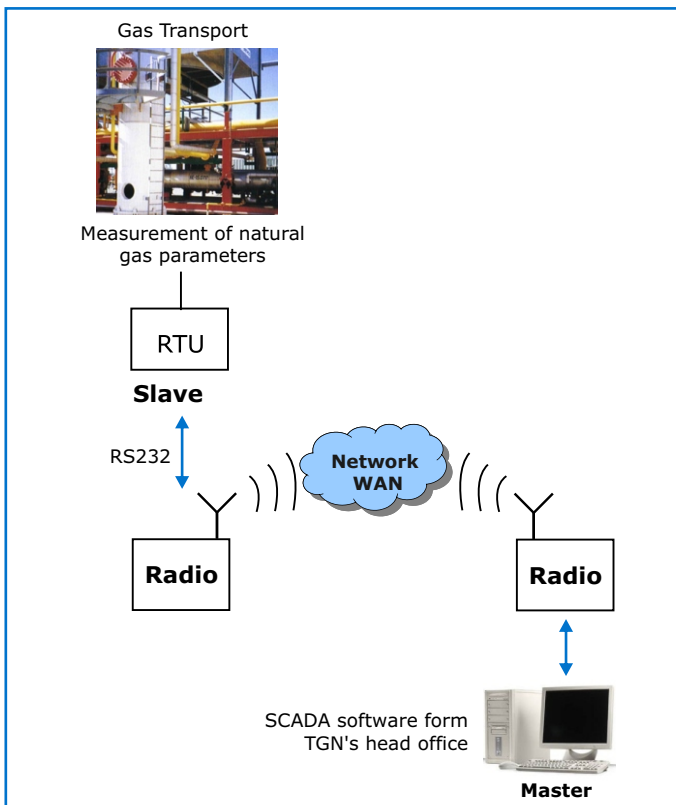

With this requirement in mind, a decision was made to use the protocol multiplexers of the SGW1-MMP family, which allow the connection of more than one Master equipment to the RTU's (Slaves).

Equipments

Multiplexor Modbus
EXEMYS - SGW1-MMP
